# Mountable Power Motors

## CHOOSE THE RIGHT AIR MOTOR TO FIT YOUR APPLICATION.

Apex Tool Group's air motors are engineered for flexibility and reliability. Cleco air motors cover a wide range of uses where compressed air is advantageous: powering air driven machinery, raising foundry cope and drags, rotating a turntable, mixing paint, powering cranes, valve actuation, or power source for mechanical hands or universal joints.

### *Rotary Vane Air Motors*

Apex Tool Group offers two types of rotary vane air motors, the large Cleco MR series (1.0 to 7.5 hp) with spring loaded blades and small to medium sizes (.14 to 2.3 hp). All motors feature durable construction with precision heavy-duty bearings throughout, and multiple blade rotors for smooth power. There is a wide range of speeds and torques as well as a choice of foot, face, or flange mounting. These motors require air line lubrication for long, trouble-free service. Mount the lubricator as close to the motor as possible. These motors perform satisfactorily in high temperature areas up to 200°F (93° C).

### *Axial Piston*

These small, lightweight Cleco motors are ideal for installation in close quarters. The rugged construction and precision manufacturing of these motors allows long life with minimum maintenance. Generous size spindle bearings permit overhung weight on spindle with no external support.

High torque is an inherent characteristic of piston type air motors, making them especially desirable for applications involving heavy starting loads. The overlap of power impulses in axial piston air motors provides even torque and full power in either direction of rotation. These motors should be operated under load and horizontally. Axial piston motors are ideal for start stop operations. It is not recommended that they be operated at speeds greater than 75% of free speed. Their enclosed type construction allows operation in corrosive or dusty atmospheres. These motors perform satisfactorily in high temperature areas up to 200° (93° C). Grease fittings are provided for lubrication. It is recommended that air lines be equipped with filters and lubricators. Mount the lubricator as close to the motor as possible.

### *Radial Piston*

Heavy-duty construction make these motors suitable for continuous operation. The counterbalanced crankshaft is supported by anti-friction bearings. A slinger distributes oil to all moving parts of the motor. Oil level and drain plugs are easily accessible.

High torque is an inherent characteristic of piston type air motors, making them especially desirable for applications involving heavy starting loads. The overlap of power impulses in radial piston air motors provides even torque and full power in either direction of rotation. At least two pistons are always on a power stroke. These motors should be operated under load and in a horizontal position. It is not recommended that they be operated at speeds greater than 75% of free speed.

These motors perform satisfactorily in high temperature areas up to 200° (93° C). It is recommended that air lines be equipped with lubricators. Mount the lubricator as close to the motor as possible.

## Air Motor Selection

To assist in the selection of an air motor, we need any two of the following three items of information:

1. Horsepower required.
2. Speed (RPM) required against load.
3. Work load expressed in foot pounds or inch pounds of dynamic torque (moving torque load).

As air motors are dependent upon input air pressure for performance, these factors must also be considered:

1. Air pressure (psig or bars) at motor location.
2. Pipe size of air supply system to assure adequate volume (cfm or m<sup>3</sup>/min) so as to minimize line loss (air pressure drop during motor operation).
3. Plant air system pressure may vary during the day due to use by other equipment; therefore, base the selection of the air motor on the lowest psig or bars that can be expected. Then, by using a pressure regulator in the line at the motor, a uniform air supply is assured.

In applications of intermittent short service, Cleco air motors can be operated over the complete range indicated for each without harm or significant wear. In applications involving sustained continuous operation for long periods, however, some guidelines are suggested. **Do not operate piston and MR motors at more than 75% of free speed.** Consult the factory for applications requiring continuous operation of rotary vane motors at maximum HP or for any applications requiring vertical operation of these motors. Review service manuals carefully.

For two known and one unknown, the following formulas can be used:

$$\text{Ft. lbs. Torque} = \frac{1000 \times \text{HP}}{0.19 \times \text{RPM}}$$

$$\text{Horsepower (HP)} = \frac{0.19 \times \text{Torque (ft. lbs.)} \times \text{RPM}}{1000}$$

$$\text{Speed (RPM)} = \frac{1000 \times \text{HP}}{0.19 \times \text{Torque (ft. lbs.)}}$$

When working with Newton meters (Nm), substitute .0258 in place of 0.19 in the formula.

Use the performance charts provided for each motor size and type for obtaining this same date procedure:

1. Select operating pressure.
2. Select torque required from the left hand scale.
3. Extend that point position across chart until it intersects with torque performance curve of the selected pressure.
4. Draw a vertical line from the above mentioned intersection to the corresponding motor scale at the bottom of the chart to determine the operating speed at the required torque and psig pressure.
4. Extend the vertical line until it intersects the horsepower curve of selected operating pressure and read horsepower from the motor scale on the right side of the chart.

Torque and horsepower curves may be interpreted for approximate performance at other psi pressure.

**Standard Equipment:**

Hex socket screw provided for closure of unused inlet. Flush fitting for lubrication of gears. Wrench for threaded spindle and collet chuck models. 1/4" collet included with series 200 & 300 collet chuck.

**Optional Equipment:**

Exhaust mufflers, remote-exhaust hoses, air intake hoses, spindle adapters and filter-lubricators available at extra cost.

Any series 200 collet may be substituted at no additional cost. On series 300 collet chuck, collets 301, 302, and 303 are available at extra cost.

Any other series 300 collet may be substituted at no additional cost.

**Important:**

A 5/16" I.D. air inlet hose may be used for runs up to 10'. For longer runs, use 3/8" I.D. hoses. Planetary gears should be greased after every 250 hours with gear grease # 45-0983, or equivalent. If air line connector is used, install at end of hose away from the tool.

**Concentricity:**

On motors with round housings, concentricity of spindle to O.D. of housing is .003 TIR.

A 3/8" I.D. air inlet hose may be used for runs up to 10'. For longer runs, use 1/2" I.D. hoses. When remote-exhaust hose is used, the portion of air inlet hose inserted into the exhaust hose should not exceed 3/8" I.D. (approx. .650" O.D.). Planetary gears should be greased after every 250 hours with gear grease # 45-0983, or equivalent. If air line connector is used, install at end of hose away from the tool.

### Concentricity:

On motors with round housings, concentricity of spindle to O.D. of housing is .003 TIR.

### Spindle Rotation

All models are right-hand rotation. To order left-hand rotation models (*not reversible*) substitute "D" for the first "-" in the model number for round housing motors and "V" for the "M" in the model number for motors with flange and base mounting.

**IMPORTANT:** Threaded spindles have right-hand threads; therefore use keyed shaft models only (-50) for left-hand rotation.

## Optional Equipment for 21 & 22 Series Motors

### Exhaust Muffler

With this Exhaust Muffler, the noise level is approximately 85 dBA. It is recommended that a motor always be used with this muffler, unless provision is made in the mounting structure, by the user, for an exhaust cavity to provide noise attenuation.

Use Exhaust Muffler 14-1117 on 21 Series side exhaust motors and 14-2110 on 22 series side exhaust motors.

### Muffler with Remote-Exhaust Hose

Remote-exhaust Hose 45-2000 (*specify length desired*) can be attached to the muffler with Hose Clamp 45-2126 to provide remote exhaust and additional quieting.  
(4' length reduces noise level to 80 dBA)

### Remote-Exhaust Hose (Rear Exhaust Models)

### Hose Line Lubricator

**45-0201 – 1/4" NPTF**

**45-0301 – 3/8" NPTF 45-0201**

Mounts in Hose Line. One ounce reservoir good for average 8-hour shift. Use in locations where it is inconvenient to use a standard air line lubricator.

### Push Pull Sleeve Valve

**14-2209**

Air inlet 1/4" female NPT; outlet is 1/4" male NPTF; stainless steel sleeve body; oil resistant O-rings.

### Push Type Grease Gun

**45 -1982**

For gear lubrication, for small flush type fittings. Can be operated with one hand. **45-0983 GEAR GREASE** for lubrication of planetary gearing.

### Hose line filter

**45-0211**

Contains a replaceable filter cartridge. Will not remove water. To be used where it is inconvenient to use standard air line filter. Filter complete with cartridge No. 45-0211. Replacement cartridge only, No. 45-0212.

### Lubricating oil

**45-0918 - Qt.**

**45-0919 - Gal.**

An excellent lubricant for pneumatic tools, non-tacky, non-gumming. Use full strength in automatic lubricators.

**45-0918**

### Gear grease

**45-0992**

**14-1/2 oz. cartridge**

Excellent grease for hi-speed gears after every 8 hours of operation.

## Accessories for MF & MR Motors

Each air motor is supplied with its appropriate muffler. Choice of foot mount brackets or flange mount is provided as no-cost option with purchase of motor...if specified.

### Muffler Identification

A muffler is furnished for the common exhaust outlet on all reversible motors. If a 4-way valve is preferred to facilitate reversing, a muffler will be needed on the exhaust outlet of the valve. Flow restriction through the valve and muffler must be minimized in order to maintain maximum power output. If a valve is not used, another muffler will be required on the inlet port not being utilized for optional inlet flow.

\* All models assume overhung load located at 1" (25.40mm) from face of motor.

\*\*These motors must be operated with sufficient load to prevent speed from exceeding maximum allowable speed shown on performance curve.

#### General:

Air Inlet: 1-1/4" NPTF

All tools performance rated @ 90psi (620 kPa) air pressure.

#### Optional Equipment:

Lubricating Oil – Part 533485 (1 gallon)

Gear Oil – Part 535090 (1 gallon)

\* NOTE: Nipples of one size will not fit couplers of another size.

\*\* NOTE: Indicates inside diameter of hose.

NOTE: 1/4" nominal will pass 49 cfm free air @ 90 psi, but pressure drop exceeds 10 psi with air flow over 30 cfm.

3/8" nominal will pass 90 cfm free air @ 90 psi, but pressure drop exceeds 10 psi with air flow over 53 cfm.

1/2" nominal will pass 168 cfm free air @ 90 psi, but pressure drop exceeds 10 psi with air flow over 109 cfm.

### Lubricants (do not substitute)

#### Oil –

- **Air Tool Oil #500021:**

Available in: 1 gal. can – part #533485

- **High Film Strength oil (for severe use):**

Available in: 1 gal. can – part #536333

NOTE: Cannot be used in AtoMist Lubricators. Use only with EconoMist or Servoil type lubricators.

- **MR Series Motors – Gearing Oil:**

Available in: 1 gal. can – part #535090

#### Grease –

##### Gear Lube:

Available in: 1 lb. can – part #A123771

1 gal. can – part #533485

NOTE: Same as Shell Oil Co. Alvania #EP RIO 71039

Grade "00" or Sun Petroleum Products Prestige 740

AEP Grade "00".
